

AMENDMENTS TO THE SPECIFICATION:

Page 3, replace the paragraph, beginning on line 12, with the following amended paragraph:

--A frame 50 carrying a screen 52 is mountable on the base by means of channelled slides 54 so that it is slidable downwardly (Figure 7) to increase the vertical dimension of the visor. ~~or to one side (Figure 8) to provide additional shade at the central zone of the windscreen. This~~ The screen is slidable to one side (Figure 8) to provide additional shade at the central zone of the windscreen. Shade at the side window may also be achieved by providing that the screen is hinged at.--

Page 3, replace the paragraph, beginning on line 16, with the following amended paragraph:

--The versatility of the visor of the invention is illustrated in Figures 9 and 10. In the former the frame 50 is dropped as in Figure 7 and the screen 52 is slid to a central position; while in the latter Figure 10, the screen 52 is swung to a position adjacent the side window while the frame 50 remains in its Figure 7 position.--

Page 4, replace the paragraph, beginning on line 1, with the following amended paragraph:

--Tension spring loops 60 are provided at the hinges ^{[[54]]} 56 so that the screen is maintained in its desired angular position.--
